On Demand Screen

Screen 1 — COCKY -Loc

The home screen will show currently active bus routes near you. You can click on one of these routes to see it's info (bus location, stops, accomodations, etc)

Screen 2 — On-Demand

Time : [ASAP ▼]
[10:45]
[1:00]

Passengers : [1 Rider ♥]

Accomodations : ☐ Wheelchair Accesible ☐ Bike
(check all that apply) ☐ Pet/service Animal Friendly ☐ other:___

Pickup Address : ◀ current Location

Dropoff Address : [Enter Text]

[REQUEST]

The current transloc app has a very clunky, rudimentary on-demand request screen. These changes make it both easier to traverse and schedule a ride, with options for scheduling a specific date/time and detailed accomodation listings to provide you with the right shuttle service for your needs.

Screen 3 — On-Demand

Shuttle ETA: 5 minutes

Pickup Adress : 123 Barnwell St.
Dropoff Adress : 456 Blossom St.

Once the shuttle has been requested, the app will show it's ETA, as well as it's current Location.

The app login uses USC data, meaning schedules can be synced with the app.
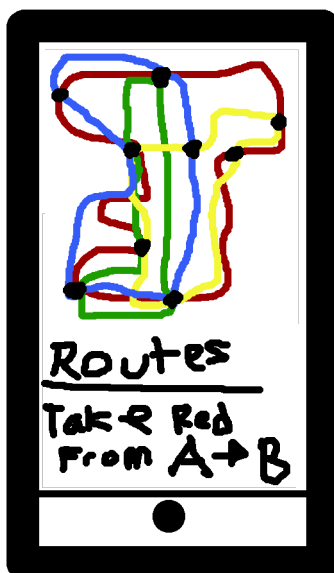

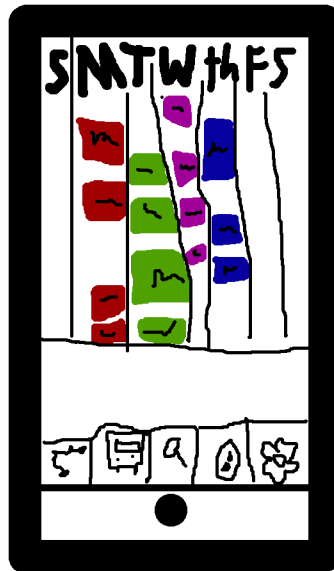

The app will take into account your schedule along with location data to determine the route to take

Routes

Take Red from A → B

And will give notices about route closures or delays

Red has high traffic, rerouting
